

Ontrack® PowerControls™

Exchange Search and Restoration Simplified

Ontrack® PowerControls™ is a simple, yet powerful tool for searching, restoring, exporting, and analyzing mailbox items directly from Microsoft® Exchange Server backups, EDB and Information Store files, or your live Exchange server.

Think about the number of e-mail messages and mailboxes stored in your organization's Exchange server backups. If you needed to find a single e-mail message or mailbox in your backups, how long would it take? If the very thought of needing to locate and restore messages or mailboxes from your Exchange server backups makes you cringe, Ontrack PowerControls is the perfect solution.

The proliferation of electronic data has resulted in an increase of stored data volume and requests to locate and restore specific messages or mailboxes. Ontrack PowerControls is an e-mail management tool that helps IT teams efficiently search, recover and restore messages, mailboxes, attachments and other Microsoft® Office Outlook® items from any previous full backup. Ontrack PowerControls will reduce the time and resources necessary to respond to a request for messages and attachments.

Alternative methods of granular Exchange item restoration, such as using single mailbox or "brick-level" backups, are typically very slow and often expensive due to the additional storage space required. Another alternative – restoring a full backup to a recovery server – can take many hours to complete and requires a hardware purchase. With these alternatives, searching through the backup to find the items you need is still necessary.

Create IT Efficiencies

Simply put, Ontrack PowerControls dramatically cuts the time and expense normally associated with Exchange item restoration.

- » Eliminate the need for brick-level backups or Exchange recovery servers, and perform granular message and mailbox recovery with ease
- » Recover, restore and search Exchange Server 2010 archived and recoverable items with the same convenience as active mail items
- » Restore items directly to your production Exchange server or any PST file directly from your server backups or un-mounted EDB's
- » Simplify e-mail management tasks such as Exchange server migration and mailbox creation

Reduce Search Time

Not only is Ontrack PowerControls an invaluable recovery tool, but a powerful searching tool as well. Locating messages, mailboxes and attachments that meet precise search criteria can be achieved much faster with Ontrack PowerControls. Use keywords and other criteria to search across multiple databases simultaneously, locate the items you need and export them back to another location with a simple drag and drop.

The robust search capabilities of Ontrack PowerControls helps your organization:

- » Locate and copy information for regulatory purposes
- » Support in-depth internal or external investigations
- » Analyze Exchange usage over a specific time period

Simple, Yet Powerful

Ontrack PowerControls offers an easy-to-use interface where you can simply drag and drop mailboxes and messages from source to destination. For larger restoration or export tasks, Ontrack PowerControls features a command line interface allowing you to easily batch repetitive processes such as multiple copy and export without the need to initiate the software. Plus, Ontrack PowerControls allows you to open multiple sources and destinations including EDB and PST files at the same time. It also installs on any Windows®-based workstation, and requires no changes to your existing backup procedures or architecture.

Simply put, Ontrack PowerControls dramatically cuts the time and expense normally associated with Exchange item restoration.
