Kroll Ontrack, a provider of information management, legal technologies and data recovery products and services, has announced the launch of Ontrack Compass enterprise archiving solution version 2.1.

Ontrack Compass enterprise archive solution v2.1 includes the following enhancements:

- Legal Hold Notification:** Legal teams can now generate legal hold notifications from within the archive, at the point the search and legal hold occurs. Authorized users can systematically manage legal hold templates and notifications across multiple matters and generate e-mail notices informing identified custodians that they have a legal duty to preserve any and all material with respect to a particular matter.
- SharePoint Archiving:** Ontrack Compass Archive for SharePoint enables organizations to meet these needs as well as improve server performance and reduce storage management costs with the power to migrate older versions of documents from the SharePoint Server to the archive.
- IM Archiving:** Ontrack Compass Archive for Instant Messages archives content to ensure that relevant data is produced for regulatory requests, litigation and investigations, which decreases the risk of sanctions and/or adverse inference.
- Exchange 2010 Compatibility:** Ontrack Compass enterprise information archive v2.1 supports Microsoft Exchange Server 2010, enabling IT teams to efficiently meet IT environment requirements as well as easily migrate to the latest Microsoft e-mail platform.
